

GENE-RELATED RNAi TRANSFECTION METHOD

Abstract of the Disclosure

The present invention relates to a novel method for determining the biological effect of a siRNA species in a cell. In particular, the present invention provides a method, wherein a support is provided, containing on predetermined locations thereof nucleic acids, representing or giving rise to a siRNA species. The support is covered by cells, into which the siRNA are taken up and exert their effect. Then the biological effect of the siRNA in the cell may be determined.
